Use S32K for the first time, record some development process. The target board is the official S32K144 development board , of course, other NXP chips are similar.

Connect the hardware

- Some students also asked what the hardware interface of SWD is like, here is also posted a picture by the way, or directly refer to the schematic diagram of the official development board:

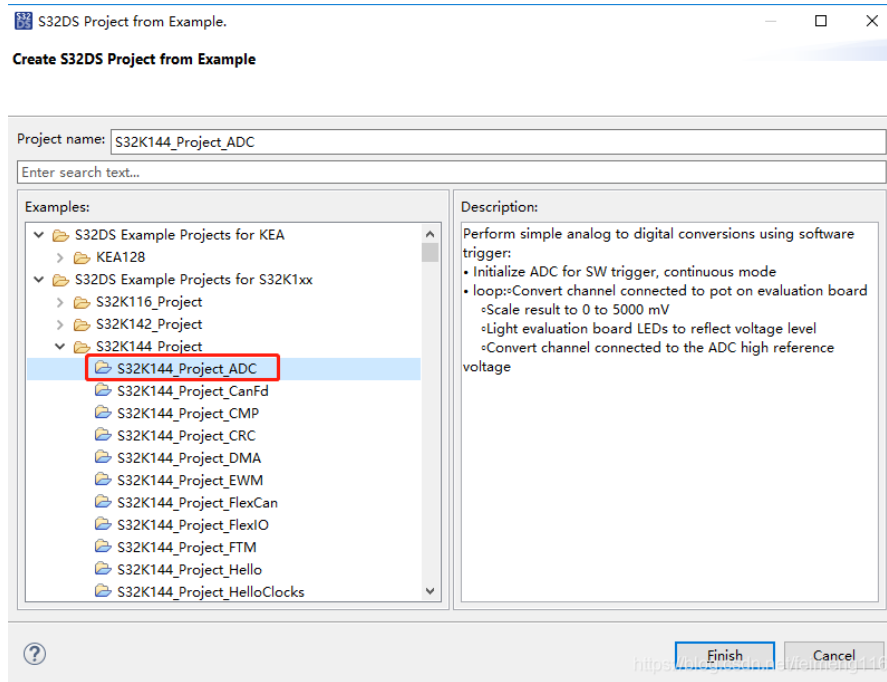

Note: SWD interface generally needs 5 pins: VDD, SWD_DIO, SWD_CLK, RESET, GND

Note: Here is a list of key points, others use the default configuration

Your browser is currently zoomed, and the page may be misaligned. It is recommended to display at 100% size.

`$(jlink_path)/$(jlink_gdbserver)`

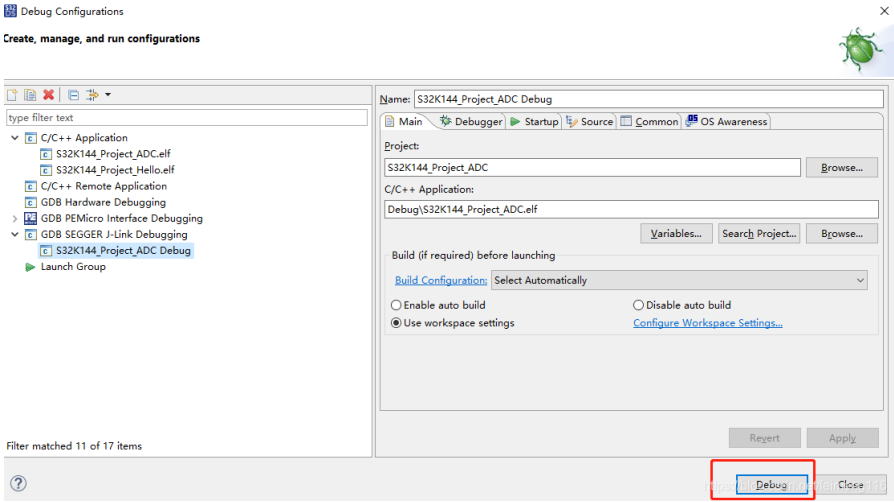

`$(cross_prefix)gdb$(cross_suffix)`

After the configuration is complete, finally click Debug to enter the debugging interface
